Piping & Pipe Rack

On-shore and Off-shore Plants
Within On-shore and Off-shore plants, we can supply to the Customer all the phases: engineering, piping assembly and assembling of carpentry and electrical parts. Using this methodology, the global managing time and the on-site costs are significantly reduced.

In the event of a plant revamping we can prefabricate piping spool following Customer’s design: material procurement (with a guaranteed traceability thanks to ISO 9001 Certification procedures), piping fit-up and assembly, Non Destructive Examination and surface protection treatment.

**Pre-Assembly**

If it was commissioned to build the pipe rack or structures, we can also perform a shop pre-assembly, witnessed by the final Customer before shipment.
